

PRODUCTS

IN THE FOLLOWING PAGES ARE SOME OF THE PRODUCTS TO LOOK OUT FOR AT **100% DESIGN AND TENT LONDON**, WHICH TAKE PLACE AS PART OF LONDON'S DESIGN WEEK FROM 18-21 SEPTEMBER

YOMEI

100% DESIGN

Yomei upholsters not only sofas and chairs in highest quality leather but also shelving, tables, boards and display cabinets. German designer André Schelbach completed his art education with an internship in Japan, where he fell in love with the culture. This translates to his work for Yomei, where his creations have a sense of Asian minimalism.

HITCH MYLIUS

100% DESIGN

Hm55, designed by architects Olaf Kneer and Marianne Mueller for Hitch Mylius, is a comfortable and versatile range of products comprising a seat unit, a pouffe and a mini side table. Each element can be combined in a number of ways and covered in a wide choice of fabrics. The frame construction is of FSC-accredited hardwood and plywood, with elastic seat suspension. The upholstery is made from graded CMHR foams with polyester fleece and the tabletop is finished in a white polyester lacquer.

MBOMYO

100% DESIGN

The Ebola table is handmade from water-jet-cut plywood, brass or copper-plated steel. Inspired by the Ebola virus, Mbomyo describes this piece as "able to adapt to many different environments. Moving from one generation to the next, Ebola waits patiently until the next victim arrives". The table almost looks like the real virus under a microscope.

NAUGHTONE

100% DESIGN

The unmistakable Trace table has become synonymous with the Naughtone brand. Since its launch in 2006 it has been widely used by designers and architects. The Trace table can be easily customised in terms of dimensions and frame colour. Pictured is the new stainless steel Trace table, which shows the metal in its raw state, making this version of Trace a standard bearer for Naughtone's immaculate quality metalwork. Creating the table in stainless steel enables the piece to be placed indoors or outdoors.

MASS CONCRETE

100% DESIGN

Mass Concrete is unveiling an intriguing range of 3D surfaces with natural highlights and shadows, and is offering a new palette of exciting effects for designers. A patented micro-concrete technology is used to achieve a combination of high strength, lightness, heat and stain resistance that contrasts with the heavy and porous nature of everyday concrete. Mass comes in a range of useful colours, from the natural greys of concrete to blacks, whites, creams, browns and pastel shades of blue, green and yellow.
