

Magic Matrix Lowboard

Design André Schelbach

This new range is the perfect complement to the existing Magic Matrix shelving system. Shelf and lowboard can be combined to one unit or mixed separately. This lowboard system offers endless combinations and functions. A storage cabinet in two widths, 73 and 98 cm, is the basis of this system. You can use the items that are available with flap or drawers, endlessly lined up and stacked on top of each other. The items are connected with a slim stainless steel profile. The elements can either be placed on a 10 cm high stainless steel leg or on a base with stainless steel cover. The surface is made of leather and is manufactured with a special folding technique. The back of the lowboard is produced in visible quality and can therefore be used as a room divider as well. The items can be combined in a way that the opening is on different sides. Lowboards, highboards or TV units can be constructed, all combinations are possible. The TV units are available with a 270 degree rotating TV holder, with back panel and infrared repeater. Cable channels ensure a smooth and invisible cable management. Magic Matrix is available in 12 different colors in leather and micro leather.

MAGIC MATRIX LOWBOARD is available in following colours:
