

## Magic Matrix

Design André Schelbach

This new shelving system has it all. It is exceptionally flexible, incredibly functional and has a modern, lightweight design. The surface is made of leather and produced with a special folding technique. The shelving system can be installed up to a maximum height of 3 m under the ceiling or on the wall. The shelves can be made in a customized width up to a maximum of 100 cm, the depth of the shelves is variable from 22 to 35 cm. The elements with flap and drawer provide a maximum of storage space. For the elements with a flap there are customized dimensions possible as well. A rotatable TV bracket provides a 180 degree view. An exceptionally feature is the LED lighting with concealed cabling, which is available as an option for the individual shelves. In addition to the LED strip lighting a LED Spot is available that allows you to illuminate important issues and emphasize them. This spot is moveable and runs in a "light rail", which is integrated into the shelf. Magic Matrix is available in 12 different colors in leather and micro leather finish.
